Investment Strategy

An evidence-based, low-cost, simple portfolio strategy designed to capture global equity market returns alongside well-diversified fixed income holdings, that provide defensive characteristics during periods of weak stock markets.

Rebalancing is driven by market movements to maintain the overall split between equity and bonds, avoiding unnecessary periodic turnover and trading costs, while maintaining overall risk profile. This means the equity target of 40% may drift down to 30% or up to 50% before rebalancing occurs.

Fund Objective

The investment objective of the Fund is to provide capital growth, net of fees, over a rolling 5 year period. The Fund is part of the TM Timeline range offering funds with varying combinations of global equity and fixed income exposure, in any or all economic sectors, achieved by investing in tracker funds (passive funds that track an index).

Investor Profile

Retail and Professional investors with Basic, Informed and Advanced knowledge and experience of investing in collective investment schemes. The fund is designed for investors seeking capital growth, income or a combination of both, and whose investment objectives are consistent with exposure to a diversified multi-asset portfolio. Investors should be able to bear capital losses and accept fluctuations in the value of their investment. The fund is intended for investors with a medium to long-term investment horizon (5+ years). The fund may be suitable for investors who are building, maintaining or drawing on investment capital, provided the investment is consistent with their overall financial circumstances and objectives. If you are unsure if this fund is right for you, please speak to your financial adviser.

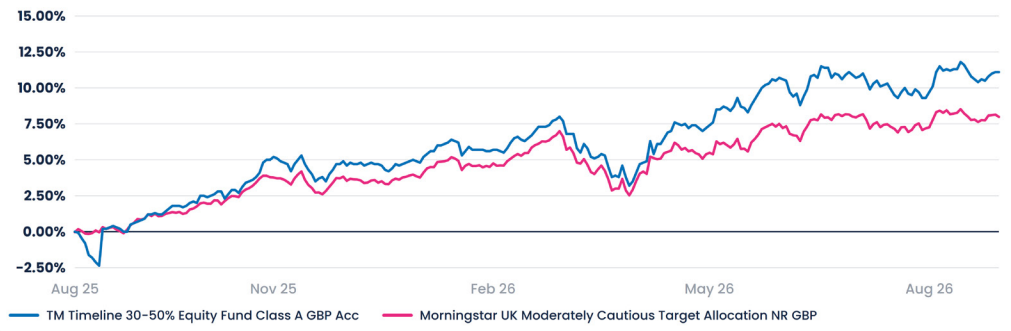
Fund Performance

All performance data as at 31 August 2026. The Fund launched on 12 August 2025.

Performance since launch

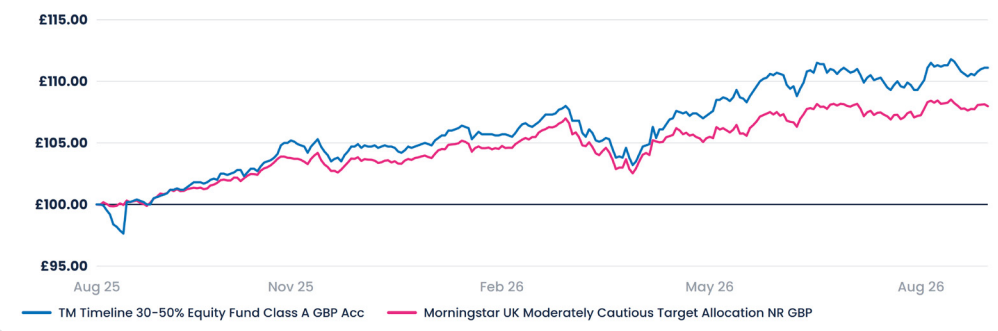
Cumulative return, %



Growth of wealth

What £100 invested at launch would be worth

Fund **£111.10**
Benchmark **£107.98**



Past performance is not a reliable indicator of future results. The value of your investment can fall as well as rise and you may get back less than you invested.

Cumulative performance

	YTD	1-YEAR	2-YEARS	3-YEARS	4-YEARS	5-YEARS	SINCE LAUNCH
TM Timeline Funds TM Timeline 30-50% Equity Fund Class A GBP Acc	**5.91%**	**10.77%**	N/A	N/A	N/A	N/A	**11.10%**
Morningstar UK Moderately Cautious Target Allocation NR GBP	**3.88%**	**7.73%**	N/A	N/A	N/A	N/A	**7.98%**
Relative to benchmark	**+2.03%**	**+3.04%**	N/A	N/A	N/A	N/A	**+3.12%**

Source Morningstar. | **Basis** Daily total returns to month end, net of all fund charges, with income reinvested. Excludes platform charges, adviser charges and tax, which can reduce returns. The benchmark is net of withholding tax on dividends only. | **Charts** Growth of wealth is £100 compounded by the cumulative return on the basis above. £100 is illustrative, not a minimum investment. Not a projection or forecast. | **Table** Not annualised. Relative to benchmark is the arithmetic difference between the two rows above. Discrete annual performance will be added once more than one is available.

Comparators

The Fund's performance is compared against the Morningstar UK Moderately Cautious Target Allocation NR GBP. It is not a target benchmark and the Fund is not constrained by it. The comparison is used to check that the Fund is offering good outcomes, at a low cost, relative to peer funds available to investors. The benchmark has been chosen because the long term strategic asset allocation of the Fund is aligned with the upper threshold of this benchmark.

Risk score (SRRI)

The Synthetic Risk & Reward Indicator (SRRI) shown below indicates the level of risk of a fund on a scale of 1 to 7. The lowest category is not "risk free". The risk category is not guaranteed and can change.

1	2	3	**4**	5	6	7

The Fund launched on 12 August 2025 and does not yet have the return history the SRRI requires. The score shown uses simulated proxy data, not the Fund's own returns, and is not a reliable indicator of future risk.

Source: Timeline Holdings Ltd 2026: All data is as of 31st August 2026. Due to rounding, some percentages may not equal 100%.

Cash positions are not part of the strategic asset allocation and are typically minimal. They may arise temporarily due to settlement timing, subscription/redemption activity, or the accrual of income distributions. As such, cash should not be interpreted as an active allocation decision. Yield data shown reflects the most recent available information from Morningstar, which currently corresponds to July.

Key Risks

Fund Risk: Investing in other funds involves risk for an investor that may differ from direct market investment. The Investments of the Company (ICVC) are subject to normal market fluctuations and risks inherent in investing in securities. The level of investment may go up as well as down, past performance is no guarantee of future returns, and you may not get back the money you invested.

Inflation Risk: The value of your investments may not be worth as much in the future due to changes in purchasing power resulting from inflation.

Emerging Market Risk: The Fund may invest in Emerging Markets and these markets are less established, and often are more volatile than developed markets and involve higher risks, particularly market, liquidity and currency risks.

Derivatives Risk: Derivatives may be used in the fund. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying asset and whilst these are used to hedge risk, the use of these instruments does not eliminate fluctuations or prevent losses. The increased exposure to an underlying asset could result in greater fluctuations of the Fund's Net Asset Value.

Counterparty Risk: A Fund may enter into transactions in over-the-counter markets which will expose the Fund to the credit of its counterparties and their ability to satisfy the terms of such contracts.

Custody Risk: The fund's assets can be held by third party custodians and may be at risk if a third-party fails to properly segregate the fund's assets.

Currency Risk: Underlying instruments may be denominated in currencies other than the share class base currency, and as such currency hedging can have an impact on the performance of a fund. The value of an investment may be affected favourably or unfavourably by fluctuations in exchange rates.

Geographical/Sector Risk: Significant exposure to a particular industry or region can increase the fund's risk of being affected by a localised event.

Liquidity Risk: The Investment Manager will seek to ensure there is sufficient liquidity within each fund's portfolio of investments; however, certain Investment positions may be less liquid. Such liquidity problems could prohibit the fund from promptly liquidating a position.

Glossary

Annualised Performance/Annualised Returns: The average return of the fund over a specific time period, expressed as a percentage.

Authorised Corporate Director (ACD): Acts as Authorised Fund Manager (AFM) to make sure the fund complies with the rules and regulations of the FCA, for fund protection and fair treatment of investors.

Asset Allocation: The internal division of an investment fund, or portfolio by asset class (bonds, equities, commodities, cash etc.) or geographic region, to diversify investment risks.

Asset Class: The type of asset your money is invested in, for example, equities or bonds. Every asset has its own individual characteristics, and by investing in various types - or combinations of types - the fund is diversified for its returns and its risk.

Benchmark/Comparator Benchmark: A comparator against which investment performance is measured, normally a market-based index or the average performance of similar assets or peers. Beating the benchmark is known as outperformance, while falling short of the benchmark's return is called underperformance.

Bond (A Fixed Income Investment): Essentially an 'I.O.U' issued to an investor in return for the loan of their investment capital. They are offered by governments, companies or local authorities as a way of raising funds without issuing extra shares. Bonds usually promise to pay a fixed amount of interest on set dates.

Cumulative Performance: This is the total gain or loss of an investment over a specific time period, often expressed as a percentage.

Equity: In relation to an investment like a fund, equity is an asset class, normally the common stock/share of a corporation. Equity itself is a broad asset class, with variations in it.

Income Yield: Shows how much income a fund or investment pays out to investors each year, expressed as a percentage of its current value or price.

Liquidity: This is the ease with which an asset can be sold without a significant loss of value.

Non-UCITS Retail Scheme (NURS): NURS funds are considered more complex than UCITS funds because they may invest in assets that are harder to price, or may be more illiquid than UCITS compliant funds. NURS products can concentrate investments more in particular assets, or types of assets and can offer greater asset flexibility and a wider range of asset classes.

Synthetic Risk & Reward Indicator (SRRI): Used to indicate the level of risk of a UCITS fund by providing a number from 1 to 7. The intention of the Indicator is to make understanding risk and reward of a fund simple and digestible. It is based on the annualised standard deviation of total returns over ~5 years. For new funds a proxy/representative (simulated) data source is used.

Volatility: This is how much and how quickly prices move over a given period of time. In theory, volatility can be seen as risk because it gives a quantitative assessment of the uncertainty of the future of the investment/fund. Volatility is only one measure of risk.

Investors are warned that past performance is not a guide to future performance, income is not guaranteed, share prices may go up or down and you may not get back the original capital invested. The value of your investment may also rise or fall due to changes in tax rates and rates of exchange if different to the currency in which you measure your wealth. Missing periods of market exposure (time out of the market) can also have a material impact on long-term investment outcomes.
